Code Meets Capital

How Technology Has Revolutionized Finance

Presented By: Mayur Raiturkar
Founder, CEO at Rescape Technologies

About Me

- B.E in Electronics/Telecomm - Goa Engineering College.
- Software Engineer with 8 years of industrial work experience.
- Worked on-site in Goa, Bangalore, Bahrain and Toronto.
- Specialsed in Systems and Site Reliability Engineering.
- Financial Technology and Blockchain ecosystem.

About Rescape

Blockchain API integration

Blockchain On-Ramping/Off-Ramping

Neo-Banking

Decentralized Finance

OUR VISION:

To build a more secure, efficient, and accessible financial world through cutting-edge technology.

Case Study 1 : Neo Banks

Traditional Banking System

Rahul Initiate the Process

In-Person Visit

Via mobile app

ICICI Bank

Phone banking

Core Banking System

Net banking

Services Provided

Loans Payments Deposits

Takes 1-2 Days

Completion of process

Neo-Banking System

Rahul Initiate the Process

Mobile App

FEDERAL BANK

Partner Bank/Fintech Infra

Core banking & licensing specialised digital services

Services Provided

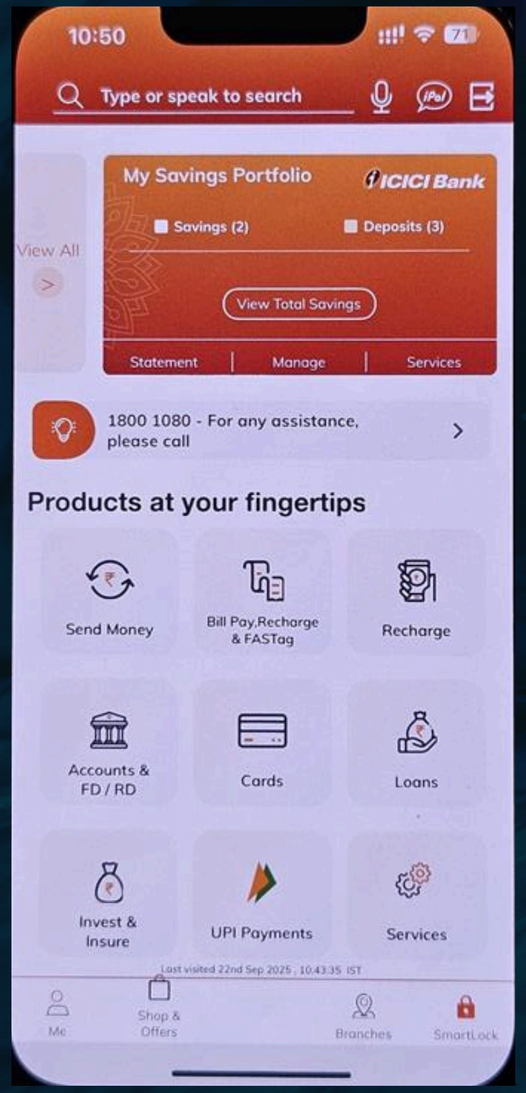

Loans Payments Deposits

Instant

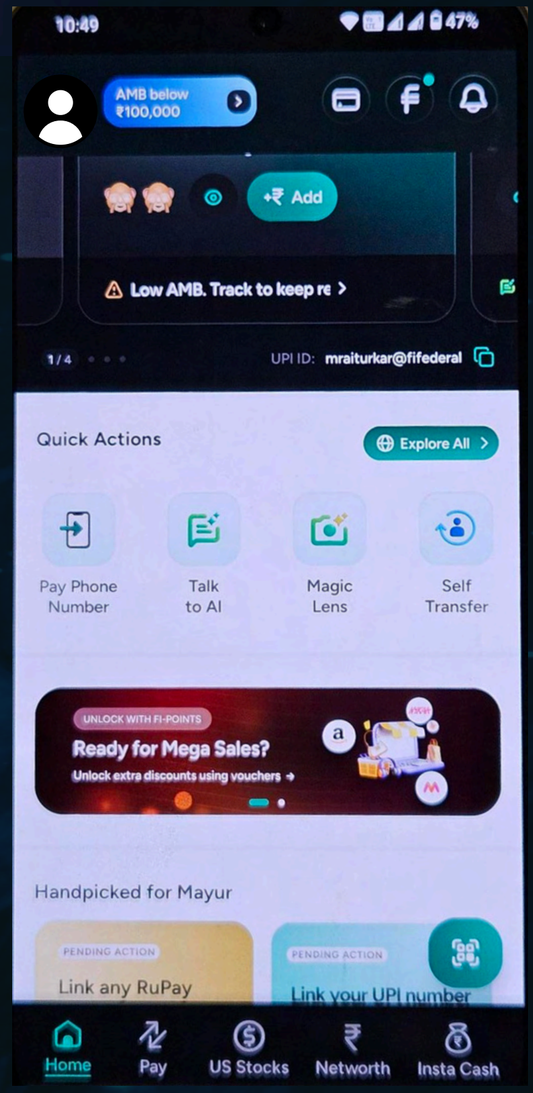

Completion of process

ICICI Bank App

Fi-Money

ICICI Bank vs FiMoney

ICICI Bank	FiMoney
Physical Branch required/Physical ATM	100% Digital
Account Opening Takes 1-3 days	Opening Account takes less than 10 min
Requires balance of ₹2,500 to ₹10,000	Zero Balance Account
Low interest rates upto 2-3%	High interest rates upto 4-6%
Forex fees on cards is 3-5% markup	Forex fees on cards 0 or <1% markup

Case Study 2:
Cross-Border Settlement using Blockchain

SWIFT Based Wire Settlement

JP Morgan Chase NY Branch(USD)

Mason Miller transfers money to Neha Sharma's Bank account

Messaging(SWIFT)
(from jp morgan to Icici)

Fedwire system

Bank of America
(Holds Nostro Account of Icici Bank)

Messaging(SWIFT)
(from Bank of America to Icici)

Currency Conversion at ICICI bank

1-5 days of delay

ICICI Bank Mumbai Branch (INR)

Neha Sharma's Bank account in India

Blockchain based Settlement

JP Morgan Chase NY Branch(USD)

Mason Miller transfers money to Neha Sharma's Bank account

Convert USD to USDC
(Bridge.xyz)

Convert USDC to INR
(Rail.io)

5 min

Neha Sharma's Bank account in India

ICICI Bank Mumbai Branch (INR)

SWIFT VS Blockchain

SWIFT Based Wire Transfers

SPEED

Takes around 1-5 Business days

COST

Fees can range from $10 to $50 per transaction

SCALABILTY

Only 5-7 Transaction Per second and slow

Foreign Exchange

High FX markups, typically 3-5% per transaction

Ethereum Blockchain Wire Transfer

SPEED

Takes around 1 Business days

COST

Fees can range from $5 to $10 per transaction

SCALABILTY

1500 Transactions Per second

Foreign Exchange

Low FX markups, typically 0.5-1.5% per transaction

Case Study 3: Decentralized Finance (DeFi)

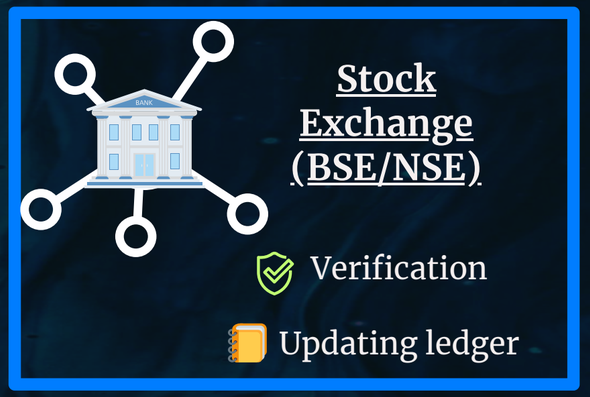

Centralised Finance

John

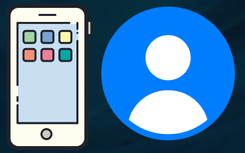

Zerodha Demat Account

API calls

API calls

Zerodha Demat Account

Bob

Decentralized Finance (DeFi)

John's Ethereum wallet

Uniswap (dApp)

API calls

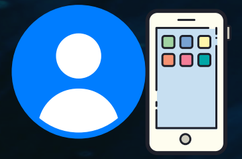

Decentralized Autonomous Organization

Ethereum Smart Contracts

API calls

Uniswap (dApp)

Bob's Ethereum wallet

Decentralized Finance VS Traditional Finance

Strengths

- Instant settlement (3–5 sec)
- Low fees (up to 95% less)
- Global access 24/7
- 1500+ transaction/sec

Weakness

- Tech knowledge needed
- Limited regulations
- Volatile assets
- Limited customer support

Opportunites

- Cross-border demand
- Lower remittance costs (90% cut)
- Inclusion for unbanked (1.4B people)

Threats

- Govt regulations
- Market volitality
- Scams & hacks
- Competition from banks

Case Study 4:
Financial Fraud Detection with AI

"What do you think happens in those few seconds when you swipe your card?"

"How many of you have ever received a fraud alert from your bank?"

"Can you guess how many fraudulent transactions banks prevent daily?"

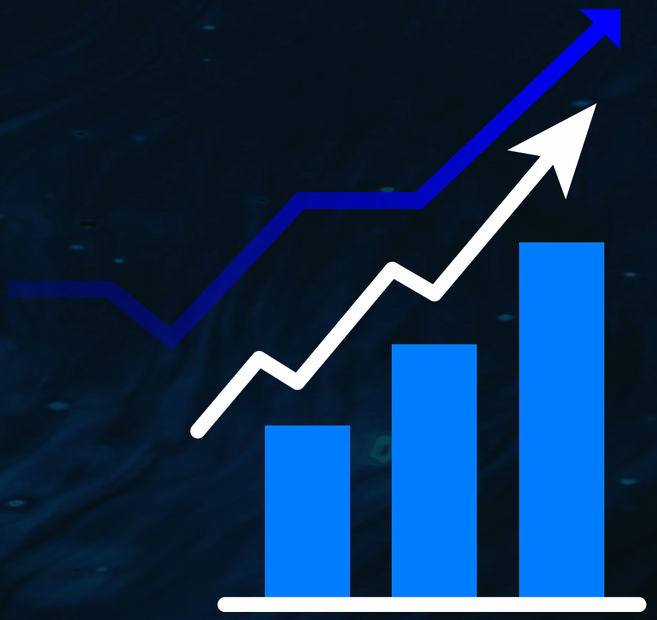

AI in Action: Tangible Results

Fraud detection

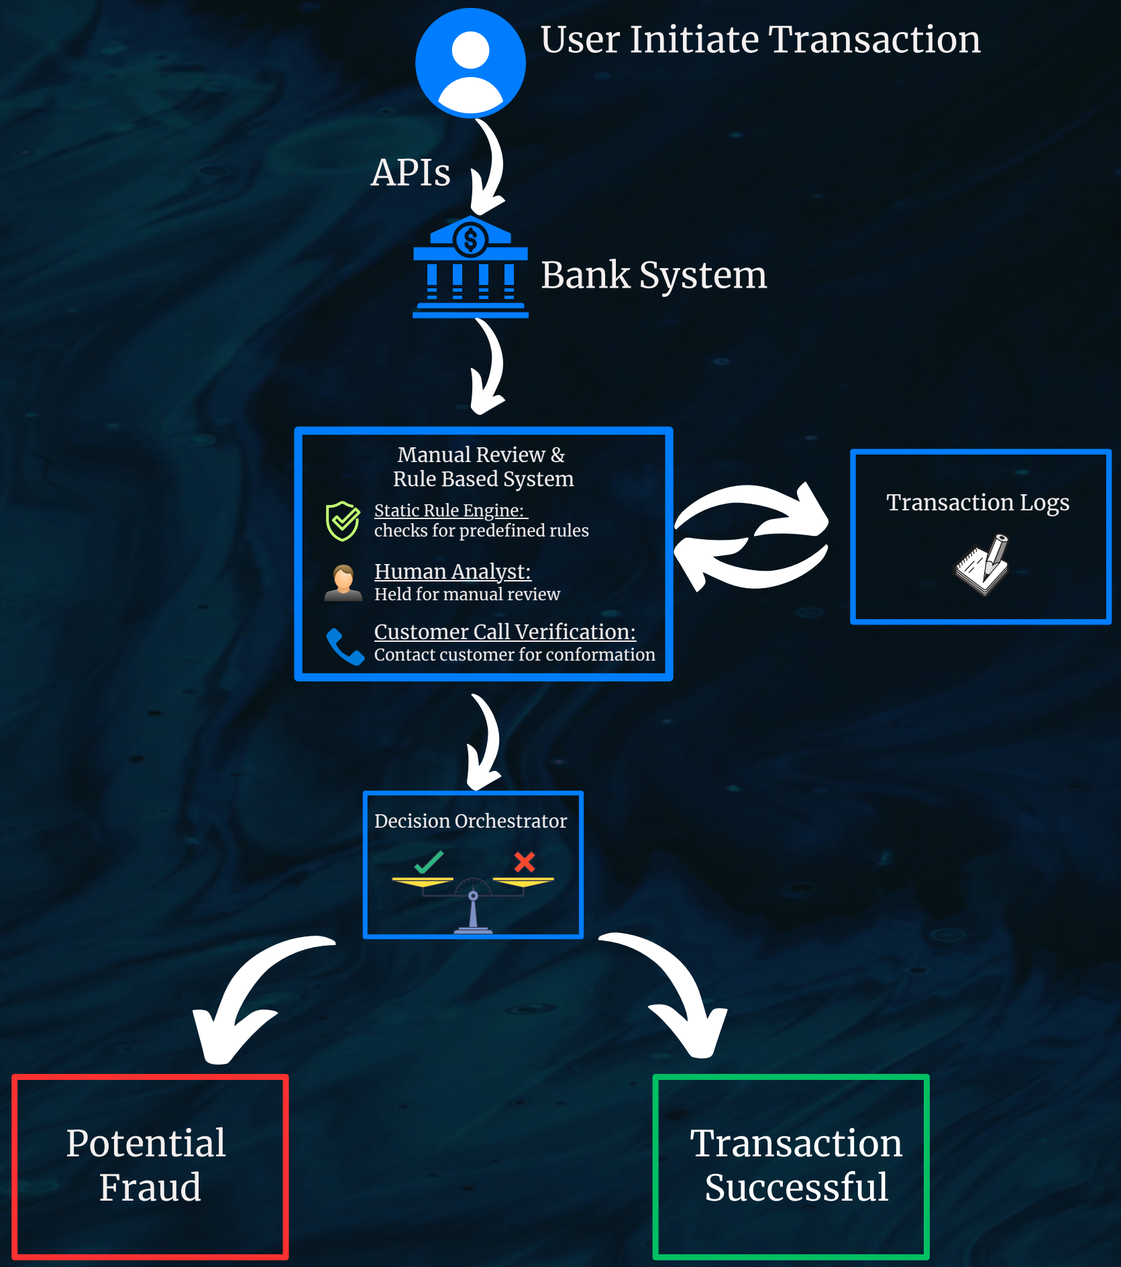

Without AI	With AI
Manual Rule-Based Systems: Fixed simple rules; easily bypassed by new fraud tactics.	**Intelligent Anomaly Detection:** Learns complex, evolving patterns to spot new threats.
Slow & Reactive: Relies on human review, fraud often detected after the loss.	**Real-Time & Proactive:** Processes transactions instantly, often preventing fraud.
High False Positives: Flags right transactions, frustrating customers and increasing costs.	**Low False Positives:** Detections focus on real fraud, improving customer experience.
Limited Scalability: Struggles with massive data; patterns in large datasets are missed.	**Massive Scalability:** Processes datasets; uncovers hidden patterns for superior accuracy.

Code Snippet

internship > m.py > ...

```python
# Basic Transaction Flow

# Step 1: User sends transaction via API
transaction = {
    "user": "Customer123",
    "amount": 500,
    "currency": "USD"
}
print("Transaction request received via API")

# Step 2: Transaction Analysis (KYC & Rules)
def analyze_transaction(tx):
    print("Checking KYC & authentication...")
    if tx["user"] == "Customer123":  # simple check
        print("✅ KYC verified")
    else:
        print("❌ KYC failed")
        return False

    print("Checking rules & patterns...")
    if tx["amount"] > 1000:  # rule: limit check
        print("❌ Amount exceeds limit")
        return False
    else:
        print("✅ Amount within limit")
        return True

# Step 3: Decision Orchestrator
if analyze_transaction(transaction):
    print("Transaction Successful ✅")
else:
    print("Transaction Rejected ❌")

```
